

LNG Emergency Response Training at Bahrain LNG

Smit Lamnalco prepared for the commencement of the new Bahrain LNG project with our LNG emergency response training (developed internally), based on the SIGTTO guidelines. The training consists of a theoretical e-learning program supported by on-site training.

On 9th April the crew and management of Bahrain LNG, clients, Teekay and PMA attended an introduction session on Emergency Response LNG training. This was then followed up by a 3-day training session for our Bahrain LNG crew on 10-12th April.

Andrew Brown, LNG Business and Project Development Director, reflects: "LNG has been shipped around the world for the last 50 years without loss of life or major incident. Safety is critical in all LNG operations. The new SIGTTO principles concerning Emergency Response for support craft are a major contributor in maintaining this immaculate safety record. Smit Lamnalco has developed a comprehensive training course in line with the new principles and we will continue to support the safety culture within the LNG industry."

Laurens van Hove, Group Training Superintendent, commented: "Not only did our Captains and Chief Engineers on board our Bahrain LNG fleet successfully complete the training program, improving their LNG knowledge and how to respond in case of an emergency situation, but also introduced the training to Bahrain LNG, Teekay and Port Authority which was very well received."

The training received an overall satisfaction rating of 9.0 / 10 with positive feedback from our trainees:

"It was a good training and it helped me in many ways"

"Very good"

"A very important course to save lives and to reduce or stop the escalation of the situation from getting worse or uncontrolled."
